Project Name	Personalized Networking Assistant
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the implementation quality of the **Personalized Networking Assistant** project. The solution successfully integrates **Artificial Intelligence, Natural Language Processing, FastAPI, Streamlit, DistilBERT, GPT-2, and Wikipedia API** to provide personalized networking recommendations, AI-generated conversation starters, event theme analysis, and fact verification. The project follows clean coding practices, modular design, and fulfills the defined functional requirements.

Instructions:

1. The project code is organized into separate modules for user authentication, profile management, AI recommendation generation, conversation generation, fact verification, and database management.
2. The solution addresses professional networking challenges using Artificial Intelligence and Natural Language Processing to generate personalized conversation starters, analyze event themes, and recommend relevant networking opportunities.
3. All required source files, trained model files, HTML templates, datasets, and configuration files are included for project execution.
4. The complete project can be uploaded to a GitHub repository for version control, collaboration, and future enhancements.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/RatnaAmulya/Personalized-Networking-Assistant
Programming Language(s)	Python, HTML, CSS, JavaScript
Framework(s) Used	Flask

AI Models	DistilBERT, GPT-2
Database	SQLite
External APIs	Wikipedia API
Development Tools	VS Code, GitHub

Code Quality Checklist

S.N o	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

- Successfully developed an AI-powered Personalized Networking Assistant for professionals, students, and conference participants.
- Uses DistilBERT to analyze event themes and GPT-2 to generate personalized conversation starters.
- Integrates the Wikipedia API to verify information and improve networking discussions.
- Modular architecture using FastAPI, Streamlit, and SQLite ensures easy maintenance, scalability, and future enhancements.
- **Future Scope:** IBM Cloud deployment, LinkedIn integration, real-time event synchronization, advanced recommendation algorithms, and mobile application support.
