

Technology Stack

Date	05 July 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Define Your Technology Stack:

The Personalized Networking Assistant uses modern Artificial Intelligence, Natural Language Processing, and web technologies to help users build meaningful professional connections. The selected technology stack ensures accurate AI-generated conversation starters, fast responses, secure user data management, and future scalability.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side (e.g., React, Angular, HTML/CSS)	Streamlit, HTML, CSS	Provides an interactive and user-friendly interface for users to enter profile details, event information, and receive AI-generated conversation suggestions..

2	Backend / Server-Side (e.g., Node.js, Python/Django, Java)	Python, FastAPI	Processes user requests, manages AI models, generates personalized conversation starters, and performs fact verification.
3	Database / Data Storage (e.g., MySQL, MongoDB, PostgreSQL)	SQLite, JSON, Conversation History Database	Stores user profiles, networking history, feedback, and application data securely.
4	Cloud / Hosting / Deployment (e.g., AWS, Azure, Heroku, Docker)	IBM Cloud / Render	Enables scalable deployment and remote access to the networking assistant application.

5	Version Control & CI/CD (e.g., GitHub, GitLab, Jenkins)	GitHub	Manages source code versions and supports team collaboration during development.
6	Third-Party APIs / Other Tools (e.g., Stripe, Twilio, Google Maps)	DistilBERT, GPT-2, Wikipedia API, Hugging Face, Transformers, PyTorch, Pandas	Used for event theme analysis, AI-based conversation generation, fact verification, natural language processing, and data handling.
