

Problem - Solution Fit

Date	05 July 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Problem - Solution Fit Canvas:

Professional networking events often make it difficult for participants to start meaningful conversations, identify relevant discussion topics, and verify information during interactions.

The **Personalized Networking Assistant** uses Artificial Intelligence, Natural Language Processing, DistilBERT, GPT-2, and Wikipedia API to generate personalized conversation starters, analyze event themes, and provide fact-verified information. The solution helps users network confidently, build professional relationships, and improve their overall networking experience.

Purpose:

- Develop an AI-powered assistant for professional networking.
- Generate personalized conversation starters using GPT-2.
- Analyze event themes using DistilBERT.
- Verify information using Wikipedia API.
- Improve users' networking confidence and communication.
- Store conversation history and user feedback.
- Deploy the application on IBM Cloud or Render for easy accessibility.

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? - Students attending placement drives - Professionals attending conferences - Job seekers - Entrepreneurs and startup founders - Business professionals - Event organizers and participants	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? (i.e. limited guidance, lack of confidence, time pressure, information overload, etc.) - Difficulty starting conversations with new people - Lack of personalized conversation suggestions - Unsure about relevant topics to discuss - Fear of rejection or awkward interactions - Limited time to research people and topics - Unverified information may lead to wrong conversations	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they used in the past? What pros & cons do these solutions have? (i.e. manual search, generic chatbots, LinkedIn, event apps, etc.) - Manual search for conversation ideas - Asking friends or seniors for suggestions - Generic chatbots (one-size-fits-all) - LinkedIn profile browsing - Event websites and mobile apps - Social media and online forums	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which job-to-be-done (or problems) do your customers try to solve? - Start meaningful conversations - Find relevant networking topics - Build strong professional connections - Make a good first impression - Verify information during discussions - Save connections and follow-ups	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? (i.e. root causes that trigger the problem) - Lack of confidence in starting conversations - No personalized or context-aware suggestions - Limited knowledge about event themes and people - Information overload and lack of verification - Social anxiety and fear of rejection - No smart tool to guide networking in real-time	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? (i.e. how do they currently try to solve it? Their habits, workarounds, existing efforts) - Search for topics on Google or forums - Read LinkedIn profiles before events - Ask friends for introduction or advice - Use general chatbots for ideas - Avoid talking to strangers - Take notes or save useful conversations	Focus on J&P, tap into BE, understand RC
Identify TR & EM	3. TRIGGERS TR What triggers customers to act? (i.e. attending an event, noticing an event, getting a meeting invite, new opportunity, etc.) - Attending networking events or conferences - Joining placement drives or career fairs - Receiving event invitations - Meeting new professionals - Looking for job or collaboration opportunities	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first. If in the new venture, define how your solution helps. - AI-powered assistant generates personalized conversation starters using GPT-2 based on user profile and event context. - Event theme analysis using DistilBERT to suggest relevant topics. - Fact verification using Wikipedia API for accurate information. - Save conversation history and key takeaways. - User feedback loop to improve future suggestions. - Streamlit web app for easy and interactive user experience. - Deployed on cloud (IBM Cloud / Render) for real-time access.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 - Access web application - Check personalized suggestions online - Receive notifications and recommendations - Share and export conversation history - Provide feedback through the app 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. - Attend events and meetups - Face-to-face networking and interactions - Read printed materials or event guides - Follow up with contacts through calls or messages - Participate in workshops and seminars	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? (i.e. anxiety, fear, uncertainty before; confidence, happiness, relief after) Before: Nervous, shy, hesitant, unsure, anxious After: Confident, comfortable, satisfied, connected, motivated			

Project: Personalized Networking Assistant – AI Powered Smart Networking Companion
Empowering Professionals with Personalized Conversations, Verified Information, and Meaningful Connections.
