

## No. of Functional Features Included in the Solution

|                      |                                   |
|----------------------|-----------------------------------|
| <b>Date</b>          | 05 July 2026                      |
| <b>Team ID</b>       |                                   |
| <b>Project Name</b>  | Personalized Networking Assistant |
| <b>Maximum Marks</b> | 5 Marks                           |

### Functional Features Overview:

This document lists the functional features implemented in the **Personalized Networking Assistant** project. Each feature contributes to building an intelligent AI-powered networking assistant using **FastAPI**, **Streamlit**, **DistilBERT**, **GPT-2**, **SQLite**, and **Wikipedia API** to help users establish meaningful professional connections.

| S.No | Feature Name                     | Feature Description                                                              | Module / Component    | Status (Done / In Progress / Pending) | Marks Contribution |
|------|----------------------------------|----------------------------------------------------------------------------------|-----------------------|---------------------------------------|--------------------|
| 1    | User Registration & Login        | Allows users to register and securely log in to the application                  | Authentication Module | Done                                  | 4                  |
| 2    | User Profile Management          | Collects user details such as profession, interests, skills, and career goals    | Profile Module        | Done                                  | 6                  |
| 3    | Event Theme Analysis             | Analyzes event topics using DistilBERT and identifies relevant discussion themes | AI Analysis Module    | Done                                  | 8                  |
| 4    | AI Conversation Generator        | Generates personalized conversation starters using GPT-2                         | Conversation Module   | Done                                  | 12                 |
| 5    | Fact Verification                | Verifies networking topics using the Wikipedia API                               | Verification Module   | Done                                  | 7                  |
| 6    | Networking Recommendation Engine | Recommends suitable networking topics and professional connections               | Recommendation Engine | Done                                  | 8                  |
| 7    | Conversation History             | Stores previous conversations and user interactions for future reference         | History Module        | Done                                  | 5                  |
| 8    | Cloud Deployment                 | Deploys the application on IBM Cloud or Render for online access                 | Deployment Module     | Pending                               | 4                  |

### Feature Summary:

| Metric                             | Count / Value |
|------------------------------------|---------------|
| Total Features Planned             | 8             |
| Total Features Implemented         | 7             |
| Core / Must-Have Features          | 6             |
| Additional / Nice-to-Have Features | 2             |
| Features Tested & Verified         | 7             |

### Feature Category Breakdown:

| S.No | Category                  | Features in Category | Example Features                                                       |
|------|---------------------------|----------------------|------------------------------------------------------------------------|
| 1    | User Interface (UI)       | 2                    | Home Page, Dashboard                                                   |
| 2    | Backend / Logic           | 3                    | User Authentication, AI Recommendation Engine, Conversation Generation |
| 3    | Database / Storage        | 1                    | SQLite Database for User Profiles and Conversation History             |
| 4    | API / Integration         | 1                    | Wikipedia API and Hugging Face AI Model Integration                    |
| 5    | Security / Authentication | 0                    | User Registration and Secure Login                                     |
